

More connections. More capabilities.

Accelerate performance

Connectivity. Security. Reliability. Each is critical to moving your business forward. Access to your network anytime, anywhere increases productivity, ensures application delivery and enables collaboration with your clients and employees.

AT&T Virtual Private Network (AT&T VPN) takes you to the next level of high performance connectivity. Highly secure, reliable network architecture provides any-to-any connectivity and keeps your business running safely.

Boost business continuity

The AT&T fully meshed network delivers network-based security, enhanced redundancy and simplified disaster recovery. Gain peace of mind with our Service Level Agreements (SLAs) covering site availability, on-time provisioning and network performance.

Simplify network management

Integrate multiple disparate voice, video and data networks to a single MPLS IP network. AT&T VPN allows anywhere, anyhow connectivity to link your locations to the network and provides class of service (CoS) enabling you to prioritize your traffic.

Potential benefits

- Highly secure, reliable network architecture providing any-to-any connectivity
- Flexibility to easily add new locations, applications and features to the network
- Improve application performance utilizing class of service (CoS) for enhanced traffic prioritization
- Ease of budgeting with flexible billing options
- Increase operational control with easy to use web-based tools
- Strengthen security and business continuity

Features

- MPLS inherent security
- Variety of access options
- Traffic prioritization, using class of service
- Multiple VPNs on a single connection
- Multicast capability, efficient bandwidth for sending data to multiple sites
- Service Level Agreements
